- ▶ Improves ability to separate stamp and texturing tools

## LITHOCHROME<sup>®</sup> Antiquing Release

LITHOCHROME Antiquing Release is a powdered, colored bond breaker for use when stamping concrete or cementitious toppings. It produces a mottled, antiqued appearance that accents the depth of the pattern and adds realistic natural-looking color variations to patterns.

### Colors:

- Available in popular colors.
- Refer to Color Selection Chart A-132.
- Additional colors can be Made-To-Order.

### Packaging:

- 25-Pound Pails

### Approximate Coverage Rate:

- Average coverage is 3-4 lbs/100 ft<sup>2</sup>.
- Coverage rates vary with pattern and color.

### Description:

- Creates antique effects that add depth to pattern.
- Prevents tools from sticking - to avoid damaging the pattern.

### Ideal Uses:

- For use on freshly placed concrete or stampable cementitious toppings.
- For use on mat-type stamp tools, embossing skins or texturing rollers.
- Not a curing material.

### Application:

- Broadcast over the surface with a mason's brush.
- Also brush release onto tools.
- Use with adequate ventilation. Do not breathe dust.
- Wear safety goggles, gloves and dust (particulate) respirator (NIOSH TC-84A approved).

## LITHOCHROME® Antiquing Release

### Keys to success:

- A darker color of release is generally used over a lighter colored concrete for better appearance of relief and depth.
- Over-application of release will result in less texture in the pattern.
- About 90% of the release should be removed prior to sealing to ensure a good bond of sealer to concrete.
- Remove the release from the highs BUT NOT THE LOWS of the imprint.

### Clear Sealing:

- SCOFIELD® Cureseal-S™ (solvent-based)
- SCOFIELD® Cureseal-W™ (water-based) - Low VOC
