CHROMIX® Admixtures

for Color-Conditioned® Concrete

Choose CHROMIX® Admixtures for Color-Conditioned® Concrete to produce colorful architectural concrete in vertical or horizontal construction projects. Integral coloring with CHROMIX Admixtures is suitable for colored concrete construction projects, including floors and hard landscapes and cast-in-place or precast walls. CHROMIX Admixtures provide streak-free color conditioning and performance characteristics superior to concrete colored with raw blended pigments.

Colors:

- More than 800 liquid color formulations are readily available, in addition to our custom color matching service.

Available in two convenient forms:

- CHROMIX P (powdered) in 24 standard colors
- CHROMIX L (mixed liquid) in buckets and totes

Keys to success:

- Request that the concrete all be batched and delivered from the same location.
- A consistent slump must be maintained for all placements.
- Avoid sprinkling water on the surface. Use a dry broom.
- Maintain uniform texturing of the surface.
- Use only recommended curing and sealing materials.
- Always produce job site samples – especially for interiors.
- If using fly-ash, a mockup MUST be placed to verify color.

For superior color development and reliable results, use LITHOCHROME® Colorwax™ and COLORCURE® Concrete Sealer to provide optimum results and allow concrete surfaces to reach their full color potential and beauty. When a clear curing and sealing material is desired for indoor or outdoor use, use SCOFIELD® Cureseal-S™.

Working tip:

Efflorescence can mask surface color. Use LITHOCHROME Colorwax to reduce the likelihood of efflorescence formation.
