REVIVE™ Exterior Concrete Stain

Scofield Revive Exterior Concrete Stain is a semi-opaque, pigmented, ready-to-use solvent-based penetrating polysiloxane stain designed to add new color to uncolored concrete, or to renew color intensity and uniformity to aged, weathered, or patched, concrete surfaces. It is ideal for unifying the appearance of partial slab replacements, patches, job continuations, or slabs of different composition or mix design. It has a VOC content of less than 100 Grams Per liter. When properly applied, Revive Exterior Concrete Stain will deeply penetrate properly prepared newly placed concrete, old concrete, concrete pavers, or unglazed ceramics.

Colors:

- SCOFIELD Revive Exterior Concrete Stain is available in 20 popular colors to approximate those depicted on Revive color chart CC-1770.
- Make to Order and custom color matching is also available; check with your Scofield representative for conditions and pricing.

Packaging:

- Single component, available in 1 gallon and 5 gallon pails.

Coverage:

- Typically 100-300 ft²/gal. depending on the porosity of the concrete.
- SCOFIELD Revive Exterior Concrete Stain must be applied full strength without thinning.

Ideal Uses:

- Add color to uncolored concrete or concrete pavers.
- Impart a consistent appearance to mismatched colors.
- Revitalize faded, worn color.

Application:

- Apply with an acetone-resistant sprayer.
- May also be applied with a brush or roller with the appropriate nap; in most circumstances a 3/4 inch nap will give the best results.
- Before applying stain, surfaces must be made porous and be dry and clean of all prior sealers, curing compound, oils, or other foreign materials that might prevent penetration or adhesion, and meet a Concrete Surface Profile (CSP) of 1, as determined by the International Concrete Repair Institute, (ICRI), Alexandria, VA.

REVIVE™ Exterior Concrete Stain

Keys to success:

- Prior to application, grind, acid etch, power wash, or scrub surfaces with stiff bristle brushes and strong detergents to remove undesired materials and any loose concrete laitance that may harm adhesion.
- Allow four to eight hours drying time before permitting foot traffic. Drying time will depend on temperature and surface porosity. Do not pressure wash or use aggressive cleaning methods for two weeks after application.

Ideal for companies both large and small who want to bring faded concrete color back up to that “new” look, or bring consistency to mismatched color.

SCOFIELD Revive Exterior Concrete Stain is available in the following colors.

C-20 Limestone
C-24 Charcoal
C-26 Antique Cork
C-31 Shadow Slate
A-26 Brick Red
A-55 Pecan Tan
