Shawn, help me with some text here. It can be about the plant designs, the sawcutting, anything to fill this up.

*Reactive waterborne stains are can be vibrant and they're environmentally friendly.*

*Whimsical designs in bright colors bring attention to this playful visitor center.*

The color palette for this remotely located project consisted of ten colors of LITHOCHROME Tintura Stain – greens, blues, browns, yellow, red and white. Five of the ten colors were “blends” of two or more colors to create a close match to the rendered design. The flower patterns were digitized to stencils that were traced onto the floor and scored using a 4" grinder. This delineated the areas and allowed for staining without unwanted blending of colors at the edges. The entire floor was then sealed with SCOFIELD Selectseal-W.

### Scofield Systems used:

LITHOCHROME® Tintura™ Stain

SCOFIELD® Selectseal-W™
