

# HIGH SOLIDS

## It's the Densifier Equivalent of Buy One, Get One Free.

Who isn't looking for a more economical solution these days? Two of Scofield's dependable densifiers can save you money by giving you more product for the same price.

**SCOFIELD® Formula One™ SG** is a sodium silicate densifier that gives you a more economical way to provide longer life to uncolored concrete floors in warehouses, distribution centers, retail stores, shopping centers and manufacturing sites.

**SCOFIELD® Formula One™ Lithium Densifier MP** gives you a more cost-effective way to provide longer life to colored architectural ground and polished concrete floors in schools, hospitals, government buildings, retail stores, shopping centers and restaurants.

**How do we accomplish this?** Scofield's product engineers have determined the optimal solids content required to deliver the best penetration and reactivity: a higher-solids-content formulation that is designed to be diluted 1:1 with potable water. This concentrated formula means you get TWICE the usable densifier in every container of SCOFIELD Formula One SG and SCOFIELD Formula One Lithium Densifier MP. For softer or more porous concrete both products can be used full strength.

Some of the advantages to this high-solids formulation are:

**Lower cost. You get twice the usable material for the same price. Your money goes twice as far!**

**Reduced inventory. You can get the desired amount of usable material by stocking half the units.**

**Reduced transportation to jobsite. You only need to transport half the amount of liquid hardener needed. An empty bucket and water will do the rest.**

**Reduces the need to double-densify a floor. The solids content can be adjusted in the field depending on the porosity of the concrete substrate\*.**

Refer to Scofield Tech-Data Bulletins B-414 and B-424.
